There's been a seemingly endless parade of tiny, Linux-powered PCs entering the market in recent months, including most recently the \$49 Cubieboard and the \$89 UG802.

It's nothing short of a revolution in computing, as I've noted before, and recently one of the earliest contenders to be announced--the Raspberry Pi-like Cotton Candy--began shipping at last after nearly a yearlong wait.

?You have impatiently (and patiently) been waiting for us to start releasing the Cotton Candy,? reads a forum post from earlier this month by FXI Technologies project administrator Borgar Ljosland. ?We are now doing it.?
