The default look of the XFCE desktop in Fedora 17, is a little boring, but this post, show how to pimp it up to look really great.

I started with a standard XFCE 4.8 Fedora installation and upgraded to XFCE 4.10.

Start the pimping

Install some new icons

```
sudo yum install faenza-icon-theme
```

Install a new theme

```
sudo yum install zukitwo-\*-theme
```
