This tutorial shows how you can [set up a Kubuntu 12.10 desktop](#) [3] that is a full-fledged replacement for a Windows desktop, i.e. that has all the software that people need to do the things they do on their Windows desktops. The advantages are clear: you get a secure system without DRM restrictions that works even on old hardware, and the best thing is: all software comes free of charge. Kubuntu uses the KDE desktop environment.
