In his email announcing the release of Linux 3.8-rc6, Linus Torvalds emphasised that he wanted the seventh release candidate to be the last one. When he released RC7 on Friday, however, he made no mention of whether there would be an eighth RC before the final version of Linux 3.8.

As long as no more major problems arise, though, the Linux kernel 3.8 should still be released this month. This article on driver updates will therefore bring the "Coming in 3.8" Kernel Log mini-series to a close. The first two parts of the series focused on the changes that kernel developers made to filesystems and storage and the platform and infrastructure code for Linux 3.8.
