In this, the second installment of our three-part series on finding the best open-source content management system (CMS) for your needs, we asked two organizations that use Joomla to explain why they felt that Joomla was the best choice for them, how the transition went, and whether they're happy with the results.

It has become the second most popular open-source CMS in use today. According to Web technology tracker W3Techs, as of February 1 about 2.7% of all websites use Joomla. This is in comparison to WordPress at 17.4% and Drupal at 2.3%. According to Open Source Matters, as of November 2012, Joomla had been downloaded more than 36 million times, including more than 9.5 million in the previous 12 months -- a 27% increase.
