Lighttpd is a secure, fast, standards-compliant web server designed for speed-critical environments. This tutorial shows how you can [install Lighttpd on a Fedora 18 server with PHP5 support \(through PHP-FPM\) and MySQL support](#) [2]. PHP-FPM (FastCGI Process Manager) is an alternative PHP FastCGI implementation with some additional features useful for sites of any size, especially busier sites. I use PHP-FPM in this tutorial instead of Lighttpd's spawn-fcgi.
