The latest milestone on the road to 13.1 was released today with less dramatic changes, as milestones are, according to Andres Silva. This release features GNOME 3.10 and KDE 4.11 betas, GCC was upgraded to 4.8, and the kernel is now 3.10.0. The next milestone is scheduled for August 8, so get in those bug reports.

Milestone 3 also features Firefox 22 with WebRTC enabled. This will allow users to enjoy sites with HTML5 audio/video features. Subversion was updated to the latest stable 1.8, which is backwards compatible, and "asm.js optimizations (OdinMonkey) is now enabled for performance improvements."
