GNOME Live ISO Overview/Review

The default desktop is no different from GNOME 3.0 and minimalistic but it does have a right click functionality which allows one to :-

- * Change Desktop settings (gnome-control-center)
- * Change wallpaper
- * Curiously, the much hated, "Universal Access" settings has been removed from the top panel.

openSUSE 13.1, M4 features GNOME Version 3.9.1 and openSUSE 13.1 will be called "Bottle" . Here is a screenshot of GNOME settings "Details" which can be invoked using command "gnome-control-center" and navigating to "Details".

The Details application can be used to:-

- * View System info like openSUSE and GNOME versions, System architecture etc.
- * Set default applications for mail, browser, calendar, video, audio and images.
- * Set default actions for various removable media like CD, DVD, USB etc.
