A powerful new Ubuntu PC has been revealed by Linux computer company System76.

The 4th generation of their Leopard Extreme series is a veritable beast of a machine, boasting the latest Intel Haswell processors, support for up to 64GB of high-speed RAM, and a choice of graphics cards that would struggle to so much as wheeze under Steam for Linux.

Pricing starts at \$1699.00 for the 'base' model:

Quad-core Intel Core i7-4820K @ 3.70Ghz
8GB DDR3 RAM (1866 MHz)
1GB nVidia GeForce GTX 650 (384 CUDA Cores)
120 GB Intel 520 Series Solid State Drive
