The second development version towards the GVFS 1.20 application for the upcoming and highly anticipated GNOME 3.12 desktop environment, has been released for testing a few days ago, introducing several important features, improvements, cleanups, translations, and bugfixes.

Various areas have been covered in this new development release of GVFS, the virtual filesystem for the GNOME desktop environment, designed to allow users to easily access remote data via FTP, SFTP, SMB, WebDAV, as well as local data via MTP, OBEX, or Udev integration, including SFTP, SMB, AFP, archive, trash, recent, and daemon.
