Knock: TCP Port Knocking Proposed For Linux Kernel

By *Rianne Schestowitz*

Created *10/12/2013 - 7:45pm*

Submitted by Rianne Schestowitz on Tuesday 10th of December 2013 07:45:16 PM Filed under [Linux](#) [1]

Port Knocking is the process of opening network ports on a firewall by first attempting to connect to a set of predefined unopen ports. It's effectively a key for opening network ports with the password being the pegging of other closed network ports in the correct sequence.
