It is possible that some devices will not work, especially if you have a newer thunderbolt equipped Mac. It is also possible that you may experience a notable decline in battery life when using Linux over OS X. However, most of the responses I've seen, as well as my own experiences, have been very positive. If you have experience running Linux on Apple hardware, the Reddit thread would love to hear from you, and I'd love to hear from you in the comments.
