Getting Mageia 4 on the laptop was no big deal. In fact, I used the 64 bit version of the OS and everything worked, even the Japanese IME with iBus.

Then I tried to get PCLinuxOS and, unfortunately, had problems with the display. I need to see if I can get to correct the problem later.

The other OS that I installed to the Strata was OpenMandriva 2013. The only problem was the lack of Wifi connectivity... It was solved easily adding the appropriate packages.
