- [How To Install Tomcat 7.0.52 Server on CentOS & RedHat 5/6](#) [4]

Apache Tomcat is an opensource webserver product of Apache Foundation like Apache HTTP server. It is used to deploying Java Servlet and JSP applications. To deploy any application in Tomcat we can simply create a war file and deploy them. For more details about you can visit apache official site <http://tomcat.apache.org/>.

- [Web Administration Scripts?Redux](#) [5]

It's been months, and I'm still dealing with a DDOS (distributed denial of service) attack on my server?an attack that I can see is coming from China, but there's not really much I can do about it other than try to tweak firewall settings and so on.
