Any option other than keeping your existing Windows XP system is going to cost money, hassles, or both. So why not give Linux a try? It is a mature, rock-solid professional computing platform you can rely on. You can download it for free, copy it to a USB stick or DVD, and try it without installing it to your hard drive. If there is enough room on your hard drive, you can install Linux alongside XP and choose the one you want to run at boot. If your XP computer is powerful enough and you have your original installation media, you can run XP inside a virtual machine on Linux. Yes, you can have it all.
