Intel has finally joined the Chrome OS bandwagon ensuring it won't become obsolete in the post PC (Windows) era. The two companies hosted a joint press event on May 6 where they announced quite a lot of Chromebooks powered by Intel chips. Intel enjoyed a monopolistic position during the Windows era and the partnership between Intel & Windows was known as Wintel, which unfortunately was bad for the industry as it lead to some anti-competitive business practices which heavily damaged (and almost destroyed AMD).
