Much of the new work planned covers porting existing Qt classes to interface with the Android provided APIs. If you need access to non-Qt provided functionality, you'll probably need to dip into JNI and call the appropriate Android Java APIs. (That topic is too deep for a 60 minute webinar, but is something that BogDan will be talking about it in depth in the hands-on Coffee & Code sessions. There are still open spots for the North American tour, but space is limited and it's free, so register and save your seat.)
