In the past when comparing the Linux and Windows performance with NVIDIA graphics when using their proprietary drivers, the performance has largely been the same. With the very latest drivers on each platform, Ubuntu 14.04 LTS seems to have an advantage over Windows 8.1 in many of the tests. With Ubuntu 14.04 LTS we were using the NVIDIA 337.19 Beta as the latest publicly available driver at the time of testing while for Windows 8.1 Pro x64 the 337.50 driver was their latest equivalent. As usual for ensuring accuracy and being a fair "out of the box" comparison, the stock settings were used for each operating system.
