Porteus 3.1 (Kiosk Edition) is based on Slackware 14.0 and relies on Linux kernel 3.12.20 and Firefox 24.0. It's a 32-bit system, which is entirely locked down to prevent tampering with any of the components (including the browser).

?This distribution release includes bug fixes, software updates and new features. At a mere 50 megabytes, the Porteus Kiosk Edition ISO includes just the libraries and utilities required to run Firefox in a secure environment, making this a perfect fit for kiosks and other web terminals.?
