Generally speaking, I enjoyed my time with LXLE. The distribution got off to a good start with a smooth installation process and the project features clear documentation and release notes, letting people know exactly what to expect from the distribution. I like the LXDE desktop as I feel it does an excellent job of balancing user friendliness, performance and features. The LXLE feature which allows us to change the look of our desktop session is a nice bonus and may make it easier for Linux newcomers to navigate the LXDE interface. The distribution ships with a lot of great desktop applications, almost all of them worked well for me. I feel that most people will be able to sit down and just start using this distribution without worrying about configuring software or downloading additional applications. The interface was responsive, the distribution doesn't use a lot of memory (even with preload enabled) and all of my hardware was handled properly.
