You possibly have heard of WebODF already, the Open Source JavaScript library for displaying and editing files in the OpenDocument format (ODF) inside HTML pages. For ideas what is possible with WebODF and currently going on, see e.g. Aditya's great blog posts about the usage of WebODF in OwnCloud Documents and Highlights in the WebODF 0.5 release.

The WebODF library `webodf.js` comes with a rich API and lots of abstraction layers to allow adaption to different backends and environments. There is an increasing number of software using WebODF, some of that listed here.
