The latest noteworthy pull request worth covering for the Linux 3.17 kernel merge window is of the XFS file-system updates.

Dave Chinner sent in the XFS pull request for Linux 3.17 on Tuesday. The changes this time around aren't anything jaw-dropping but just another minor step forward for this file-system competing with EXT4 and Btrfs. Perhaps the most notable change this time around is the introduction of a sysfs interface to the file-system. Below is Chinner's highlights for XFS on Linux 3.17.
