After lot of work and several delays, we proudly announce the availability of SUSE Linux 10.1. In tribute to 42 and as today is the fifth anniversary of the death of Douglas Adams, we dedicate this release to him.

As usual, we ship all the latest open source packages available at the time. But we want to give special mention to Xgl for 3D acceleration on the desktop, NetworkManager for getting painless wifi access everywhere, the completely open source AppArmor 2.0, and the full integration of XEN 3 in YaST.

SUSE Linux 10.1 is offered via bittorrent and via normal download.

Please use a mirror or the download.opensuse.org URL which directs you to a mirror.

The opensuse.org site is down due to heavy load, but there is more information available, including some download links, [HERE](#) [2].

There is a skeletal download page [HERE](#) [3].
