Hard to choose between Raspberry Pi, BeagleBone Black, and MinnowBoard Max? Now there's another choice: the open source MIPS-based Creator CI20 dev board.

In a bid to harness some of the energy and enthusiasm swirling around today's open, hackable single board computers Imagination Technologies, licensor of the MIPS ISA, has unveiled the ISA's counter to ARM's popular Raspberry Pi and BeagleBone Black SBCs. These days, every processor vendor simply must have a community supported dev board in order to engage with the developer communities. (Incidentally, Intel's is the MinnowBoard Max and AMD's is the Gizmo.)
