Submitted by srlinuxx on Friday 12th of May 2006 08:03:20 AM Filed under [Reviews](#) [1] [SUSE](#) [2]

Purpose:

To directly compare the release of SUSE 10.1 to SUSE 10 in the eyes of the end user.

In this review, I'm hopefully going to highlight most of the changes Joe end-user might notice when upgrading or switching over to 10.1.

My Test Hardware:

LG LU-20 Centrino laptop

1Gig of RAM

60 Seagate HDD

855GMe chipset

Integrated Graphics (intel 'extreme graphics')

ICH4 integrated sound.

802.11b Intel Pro Wireless Mini-PCI. (aka ipw2100)

It pleases me to see improvements right off the bat.

The installation:

As with every SUSE release we get to see some new eye-candy and graphics on the install, and this time around SUSE has not left me disappointed in the least. You could suggest the new look smells a bit of apples but as far as I care as long as my eyes don't bleed I'm happy.
