Inforce Computing unveiled an Android-ready Pico-ITX IFC6540 SBC that extends Qualcomm's quad-core 2.5GHz Snapdragon 805 SoC with wireless, GPS, and more.

Like the Qualcomm Snapdragon 600 (S4 Pro) based, Android-ready IFC6410 SBC that Inforce Computing announced last year, the new IFC6540 uses the 100 x 70mm Pico-ITX form factor. (This week Inforce added a Linaro/Ubuntu Linux build pre-loaded on the IFC6410, sold at a discounted rate of \$75, down from \$149.)
