When you're publishing anything online, the way you lay out your content can be as important as the content itself. A good layout can help readers better interact and consume that content.

Users of content management systems like Drupal have a number of options that allow them to create very attractive, very usable layouts. That's one factor that drew Murray Woodman to Drupal. He co-founded Morpht, a Drupal-based web development shop in Sydney, Australia. He found that Drupal 6 provided a level of freedom and productivity, and hasn't looked back.

One Drupal module for laying out pages that Woodman is keen on is Paragraphs. I caught up with Woodman ahead of his talk at DrupalCon 2015, and he kindly shared his insights into the Paragraphs module.
