- [Plasma 5.4 Kicked Off](#) [2]

Plasma 5.4 is scheduled for August, it'll be a great addition to Kubuntu 15.10.

- [Plasma 5.3 for Fedora](#) [3]

Plasma 5.3, new feature release of KDE workspace, has been released on Tuesday and you can get it now on Fedora.

Plasma 5.3 brings new features, improvements and almost 400 bug fixes for basically all of its components ranging from power management to various applets.

- [KDE 5 15.04 for Slackware-current: back to work](#) [4]

An update to my KDE 5 packages was overdue. Ever since the 'big upgrade' in Slackware-current a week ago on 21 April 2015, there have been some stability issues in the Plasma 5 desktop. The instability was caused by the version bumps of various libraries that the KDE software is depending on ? you can not dynamically link to a software library that's no longer there because it has been replaced with a library bearing a new version number. I felt I had to recompile everything just to be sure there was no hidden 'breakage' left, and so I took the opportunity to wait for the newest Plasma release and present you with all-new packages.
