For consumer electronics industry, digital home is the next big pot of gold, a pot so big that it has everyone from Apple (AAPL) to Microsoft (MSFT) to Intel (INTC) licking their chops. But it is Linux could emerge as one of the biggest winners in this bonanza.

The demand for networked CE devices is going to increase in tandem with the availability of faster in-home networks that can shunt data at blazingly fast speeds. Technologies such as MOCA, HPNA 2.0 and 802.11n will allow us to move content from one device to another.

Scores of other start-ups are experimenting with Linux-based home entertainment systems, music players and digital video recorders. IntAct, a spinout from set-top box maker, Amino has just started selling a Linux-based software stack that runs on any kind of chip, and can also run Opera browser.
