Consumers on the prowl for a PC will be spoilt for choice with Singapore based eSys Technologies and multi-national HP both rolling out low-cost workstations this week.

The system, tagged as the lowest-priced PC on the Singapore market was unveiled at eSys' first Singapore Trade Show, held a day after the company celebrated the official launch of its Singapore headquarters.

The SGD 399 made-in-Singapore PCs runs on the Pentium 4 platform with a Linux OS, but for an extra SGD 200, you get the same PC running Windows XP.
